

Aquatic Control's "Green" Approach to Pond Management

Various non-chemical techniques provide an often desired "green" approach to pond management. Although it may be difficult to address specific problems with nuisance weed and algae in a timely fashion with some of these approaches, they can be used to improve the overall health of the pond. The techniques

listed below can be used alone or in combination based on the needs of your pond, although the use of some methods may be restrictive based on the size of the pond. A baseline of data is important to properly design any pond management program. Please give us a call to talk about a program or check out more information on our website at www.aquaticcontroltech.com

Enzymes & Bacteria

Aeration

Pond Dyes

Bottom Barrier

Mechanical Harvesting

Hydro-Raking

Herbaceous Fish & Insects
